

Vedant RAJPUT

Data Scientist · Seeking a 6 month end of studies Internship · Starting : July 2026 · Adaptable to organization's hiring timeline
vedantt.rajput@gmail.com | +33 6 26 47 78 86 | Paris, France | [linkedin.com/in/vedant-rajput](https://www.linkedin.com/in/vedant-rajput) | github.com/vedant-rajput

PROFILE

Master's student in Data Science & Analytics at EPITA with hands-on experience in **Python**, **deep learning**, end-to-end ML pipelines, and **AWS cloud services**. Published research and applied projects spanning predictive modelling. Familiar with **RAG-based systems**, **LLMs**, and **NLP**. Seeking a 6-month data science internship to apply research-driven analytical skills to production-scale data challenges.

EDUCATION

Master of Science in Data Science and Analytics, 10/2025 – 03/2027 | Paris, France
EPITA: L'école des ingénieurs en informatique

Bachelor of Technology in Computer Science and Engineering, 09/2020 – 06/2024 | Hyderabad, India
Jawaharlal Nehru Technological University - JNTUH

PROFESSIONAL EXPERIENCE

MetaTaarak AI Innovations Pvt. Ltd | AI Engineer Intern 01/2026 – 04/2026
Structured AI engineering (virtual) programme · AICTE-accredited, under India's Ministry of Education

- Designed and trained **deep learning models** using **TensorFlow**, **Keras**, and **PyTorch** across **supervised** and **unsupervised** learning paradigms, applying regularization, dropout, and hyperparameter tuning to **optimize model performance**.
- Applied end-to-end machine learning workflows** with **Scikit-learn**, **Pandas**, and **NumPy** covering EDA, **feature engineering**, model selection, cross-validation, performance evaluation and **Executed 4+ AI engineering projects** through a structured industry curriculum.

PROJECTS

NASA's Helio-Forecast: Geomagnetic Storm Prediction via Deep Learning  01/2026 – 02/2026

- Architected a Bidirectional LSTM (TensorFlow/Keras)** for **geomagnetic storm prediction** 3 hours in advance, achieving an **R^2 of 0.23** on held-out test data competitive with published **operational baselines (0.15–0.28)** for 3-hour Kp-index forecasting, a domain where the **inherent unpredictability** of solar wind fundamentally constrains **forecast precision**.
- To support this, built a custom **ETL pipeline** to **ingest and impute 24+ months of NASA OMNIWeb satellite time-series telemetry** into a reproducible **training pipeline**, ensuring **data integrity** from **raw sensor ingestion** through to model evaluation.
- Engineered physics-informed features (Eyring Energy: $V \times B_z$)** instead of **raw sensor inputs**, improving the model's capacity to capture magnetospheric energy transfer by 15% – a domain-driven approach validated against baseline LSTM.

European AI Regulatory Compliance Engine (Multi-Agent RAG)  03/2026 – 04/2026

- Engineered a hybrid retrieval pipeline** combining **Qdrant vector search (gemini-embedding-001, 768-dim, COSINE)** and **BM25** keyword search fused with Reciprocal Rank Fusion (**RRF k=60**), with **LLM listwise re-ranking at temperature = 0** over **16 candidates** to return **top-8** chunks.
- Built a 3-agent agentic pipeline** (Internal Researcher → External Fact-Checker via DuckDuckGo/FastMCP → Synthesizer). **Designed Sequence Matcher** word-level **chunk** to PDF alignment with highlighted annotations.
- Indexed 280 pages / 1,045,540 characters** across 3 regulatory PDFs (**EU AI Act, GDPR, NIST AI RMF**) into **2,758 semantic chunks** (500-char window, 100-char overlap), **achieving 100% generation accuracy** on a hand-labeled 20-question evaluation dataset.

End-to-End MLOps Pipeline: Taxi Fare Prediction  02/2026 – Present

- Architected** a production-grade NYC Taxi Fare prediction system, automating the lifecycle from **data ingestion (Airflow 3)** to model tracking (**MLflow**) and deployment (**FastAPI/Docker**).
- Data Integrity & Governance: Integrated Great Expectations** to enforce data contracts, enforcing **data consistency** and reducing silent failures by validating quality before inference, with all metrics logged via a custom **PostgreSQL/SQLAlchemy** layer.
- Automated Retraining:** Designed a **"Champion-Challenger"** model promotion strategy using **Airflow DAGs** to trigger retraining and evaluation, ensuring the production model remains accurate against live data.

MRI Brain Tumor Classification Using a Hybrid VGG16-NADE Model  10/2023 – 01/2024

- Built a hybrid **VGG16-NADE architecture** for MRI brain tumour multi-class classification, **achieving 97% accuracy (+7pp over VGG16 baseline)**.
- Applied advanced **data augmentation** and **transfer learning techniques** to a medical imaging dataset, demonstrating that **generative distribution modelling** can be fused with **CNN** feature extraction to outperform standard **computer vision architectures** in low-data clinical settings.

SKILLS

Technical Skills: Python, SQL, PostgreSQL | **AI & Machine Learning:** Hugging Face, Retrieval Augmented Generation(RAG), Large Language Models(LLM's), N8N, CNN, LSTM, Computer VisionScikit Learn, TensorFlow, Keras, PyTorch, Matplotlib, Seaborn | **Tools & Frameworks:** Git, Docker, AWS, Github Actions (CI/CD), Streamlit, MLflow, Great Expectations, Airflow 3, FastAPI

PUBLICATIONS

Authored and published research paper: 'MRI Brain Tumor Classification using a hybrid VGG16 Nade Model', in the **3rd International Conference on Innovations and Recent Trends in Computer Science (ICIRTCS-23-064)**, December 2023, ISBN: 978-93-91420-60-4.

ACHIEVEMENTS

- Officially Licensed Badminton Player under the Fédération Française de Badminton (FFBAD).
- National Football Player; Captain of College Football (Soccer) team, represented at National, State and University tournaments.
